

FIELD MEASUREMENTS OF IMPACT SOUND INSULATION OF FLOORS

Date of Test : Tuesday, 22 September 2020
 Project No. : 4225
 Testing Company : Koikas Acoustics
 Checked by : Nick Koikas
 Place of Test: Residential building in Macquarie Park
 Client : Paxwood Pty Ltd (Clever Choice Design Floors)
 Client Address : -

Description of Floor System	Name	Thickness (mm)	Density (SI)
Engineered Timber 12mm		12	--
Clever Sound 2.5mm underlay		2.5	--
Concrete		200	--

Room Dimensions	Width	Length	Area
Room	3.6 m	3.6 m	13 m ²
Floor	3.6 m	3.6 m	13 m ²
Dimensions	1 m	1 m	1 m ²

Receiver Rm	Location	Width	Length	Area	Height	Volume	Room Surfaces		
							Walls	Floor	Ceiling
Unit directly below - living area	3.6	3.6	13	2.7	35	Plasterboard	Carpet	Plasterboard	

Frequency f Hz	L'nT (one-third octave) dB

Definitions of Noise Metrics

FIC: Field Impact Insulation Class is a single-number rating of how well a floor system attenuates impact type sounds, such as footsteps. Calculated from third-octave band normalised impact sound pressure level data and referenced to 10 m² as described in ASTM E989. The higher the single-number rating, the better its impact insulation performance.

L'nT,w: The Weighted Standardised Impact Sound Pressure Level when measured in situ referenced to a reverberation time (RT60) of 0.5 seconds. Used by the AAAC to determine their respective Star Rating.

Ci: Spectrum adaption term is a low frequency correction factor. Typically for massive floors such as concrete, the values are about zero while for timber joist floors Ci is positive because of the low resonant frequencies. Considers frequency range between 100 -and 2500 Hz.

Ci(50-2500): Same as above, but for the frequency range 50 -2500 Hz.

Ci(125-2000): Same as above, but for the frequency range 125 -2000 Hz.

AAAC Star R.	2	3	4	5	6
L'nT,w	65	55	50	45	40
FIC	45	55	60	65	70
